

Software Release Notes

70 Series UMTS firmware and PRI settings update tool

Overview:

This tool enables the user to upgrade the UMTS WAN radio firmware and PRI settings on the 70 Series device. Instructions on its use are included in the release bundle.

Computers Supported:

Intermec 70 Series UMTS

Operating Systems eligible for upgrade:

This firmware upgrade tool, Version 2_0_7_50B is compatible with 70 Series UMTS OS V1.21.11.0035, V1.30.14.0045, and V1.42.16.0052 or later.

Reasons for performing this upgrade:

The firmware is required to enable HSPA (5.76 mbps max uplink speed) for AT&T networks.

Tools:

BU_K2_0_7_50Bap_boot_wm.CAB(firmware update tool). This tool will install the WAN radio firmware.

Intermec Technologies PRI_Tools_final_SKU.cab (PRI settings tool). This tool will configure the WAN radio to run in HSPA mode.
