

Software Release Notes

VERDEX Solution Component V1.10

OVERVIEW

VERDEX is a software solution for the CN3, CN50, and 70 series mobile computers that provides delivery address extraction and verification. VERDEX Solution Component installation provides developer APIs for C++ and C#, a .NET VERDEX application component, a demonstration application and documentation including demonstration databases and sample addresses. For demonstration purposes, sample databases are included and a license is not required when using these sample databases. For actual deployments with a production database, this software will require a license.

Version Numbers

| Major Deliverable | Current Version |
|---------------------------|-----------------|
| VERDEX Solution Component | 1.10.00.0109 |
| VERDEX Demo | 1.10.00.0109 |

PB22 FingerPrint

PB32 FingerPrint

PB50 FingerPrint

Demo Installation Notes

1. After the download and installation is complete, browse to C:\Program Files\Intermec\VERDEX\Runtime\WCE600\WM6\Armv4i. The VERDEX.cab file is located in this directory. This .cab file installs the Mobile Component and Demo on the computer.
2. Copy VERDEX.cab to the \Cabfiles directory on the mobile Computer
3. Warm boot the mobile computer. The VERDEX installation starts and takes a few minutes to complete. You do not need to warm boot the computer again after the installation is complete.
