

**SOTI Wireless Network Management Software**

SOTI Inc. supplies the Wireless Network Management Software for Intermec’s AIT-IV contract (W91QUZ-09-D-0044).

AIT-IV CLIN	0031FA	0031FB
Description	Wireless Network Management Software (Server)	Wireless Network Management Client Software (HHT)
Product	SOTISERVER	Intermec 474-500-301
Price	NSP	\$31

CLIN 0031FA, the SOTI Wireless Network Management Software Server, runs on your Windows-compatible server. It is required to manage the licenses for the SOTI client software loaded on the HHTs. The installation package includes the MobiControl Deployment Server service as well as the management consoles, which is the server-side user interface. There is no charge for this software, and it can be downloaded for free from the SOTI web site listed below.

CLIN 0031FB, the SOTI Wireless Network Management Software Client, MobiControl Device Agent, runs on the HHT and is the device-side component. This software is also included in the installation package, which can be downloaded from the SOTI web site, but it requires a license for each HHT to operate and must be purchased from the Intermec AIT-IV Contract. Instructions for ordering can be found at <http://www.Intermec.com/AIT>

**AIT-IV Delivery Order**

If you have placed an AIT-IV order for CLIN 0031FB, you will receive a license document that will include your **Registration Code** and a link to download and activate the SOTI software.

**Free Trial Software**

You can register for a free, 30-day trial of the SOTI Wireless Network Management Software at the following website:

<http://activate.soti.net/MCDownload/Default.aspx>

To register for the free evaluation software, you must fill-in the requisite information on the web form. Once you complete the registration, you will receive a trial Registration Code and a link that allows you to download the software. The software is fully functional, but it will become inactive after 30 days. If you purchase a client license, you can reactivate the trial software by entering the provided Registration Code into the SOTI Network Server and you will not need to download or install the installation package again.

**MobiControl Core Features**

MobiControl is a next generation Mobile Device Management, Security and Support solution that is built using SOTI world-class award-winning technology.

Whether you are using consumer-based devices for push email or ruggedized devices in the field, MobiControl is the solution of choice for rapid and reliable performance over any network for any size of deployment.

**Help Desk Tools**

Real-Time remote control to devices over any network (for example, cellular, WiFi, cradled devices). Rich set of remote diagnostic and troubleshooting tools.

**Device Provisioning**

Deploy software, data, and configuration settings to remote devices over any network. Track software / hardware inventory.

**Asset Management**

Software and hardware inventory tracking. Keep track of all mobile devices in an organization.

**Alerts**

Automate monitoring of customizable device-side and server-side events, execute customized actions, and set up notifications via email or text message.

**Reporting**

Create and customize detailed reports, full integration with 3rd party reporting tools (for example, Crystal Reports).

### **Location Services**

Locate and track your mobile assets, including GeoFencing, reverse geo code, live traffic conditions, speed, heading, current location, and bread-crumbing.

### **Advanced Security**

Active Directory-based authentication policies, full Device and Storage card encryption (FIPS 140-2), Application Run Control (white list/black list), Device Feature Control (for example, disable phone, Bluetooth, camera, etc.), Device Lockdown (i.e. Kiosk Mode), Phone Call Policy & more.

### **Data Sync**

Synchronize data and files between servers and mobile devices. Automatically execute scripts before or after synchronization.

### **CRM**

IT support teams can collaborate on support issues and save time by having a case and location history for their deployments.

### **Diagnostics**

Over-the-air Diagnostic Imaging Tools to automatically detect and correct problems.
