

This quick reference guide describes how to assemble and use the holster and belt with a laser scanner.

Scanner Holster and Belt Quick Reference Guide

The scanner holster and belt is a convenient way to store your scanner on you when it is not in use. The holster can be used with the belt provided or with any regular belt. If the holster and belt are missing or damaged, please call your local sales representative.

To use the holster and belt

1. Place the belt around your waist and fasten.
2. Adjust the belt until it is comfortable yet snug.
3. Slide the holster flap under and over the belt and adjust the holster to rest on the outside of the thigh.
4. Slide the flap under the elastic band and snap closed.

To use the holster with your own belt, slide the flap under and over your belt, adjust the holster, and slide the flap under the elastic band and snap closed. You can adjust the holster for different belt widths using the two snaps on the holster.
