

155X Scanner Stand Modification Instructions

The scanner stand modification kit contains the following items:

- Scanner holder with integrated retaining magnet
- Non-reflective label for “B” models (P/N 065545-001)
- 155X Scanner Stand Modification Instructions (P/N 066874-001)
- Reflective label for “A” models (P/N 063908-002)

The kit is used to convert an older model 155X series scanner stand to work with Intermec 1550B and 1551B scanners. It also provides a reflective label if you want to convert a new stand to work with “A” model scanners.

- Refer to the C/N designation on the scanner handle to determine the type of scanner you are using. The “A” or “B” appended to the model number designates the version of scanner that you are using.
- If you are upgrading your scanner stand to use a “B” model scanner, you need to replace the existing holder on your scanner stand and cover the existing reflective scanner label with the non-reflective label contained in this kit. If you are modifying your scanner stand to use an “A” model scanner, you only need to verify that you are using a reflective label.

To install the scanner holder

1. Using a Phillips screwdriver, remove the holder retaining screw located on the front/center of the scanner holder.
2. Fit the new scanner holder from the modification kit on the scanner stand column. Make sure that you align the adjustment screw hole on the holder with the hole on the scanner stand column.
3. Install and tighten the Phillips screw to secure the scanner holder to the scanner stand column.

To determine the correct label

- To configure an older model 155X series scanner to work with “B” model scanners, replace the reflective label on the scanner stand with the non-reflective label included in this kit. Otherwise, use the reflective label with your “A” scanner.

You can use the following scanner configurations in auto-trigger mode.

1550A02	1550A04	1551A02	1551A03	1551A07
1550B0200	1550B0400	1551B0200	1551B0300	1551B0700
